Comments: It is my Belief that the Forest Service has a Custodial and Stewardship Responsibility to Ensure that Protected Wilderness Areas are not Misused and or Abused so as to Erode the Integrity of the Natural Eco System. We have witnessed historically what happens to Wilderness Areas that are Mismanaged largely through Overgrazing and mismanagement of their Natural Resources which not only lays waste the natural vegetation but its water sources as well. With the Sophisticated Knowledge we have available in this day and age, it should be of great National Importance to Insure that our Surviving Wilderness Areas be Managed with an Arching Overall Vision and Integrated Planning that Insures their Wellness and abundance of Resources enough to Insure that they will thrive for Generations to Come!
