Comments: If you've ever been on Federal grazing lands as I have, to see the destruction that cattle and sheep cause to the eco-system, well this would not be an issue. Eaten down to the root systems many of the areas are grass poor to begin with. The amount of beef manure that covers these areas is enough to cause a methane catastrophe. Don't take my word for it. Check the situations out. The destruction is enough to make a grown man cry. The natural grazers are forced unto private property to eat and are usually killed quietly. Please Look Into This Get Out From Behind Your Desks!!!!
