Comments: Rangeland Management Directives could significantly affect millions of acres of public land. This includes Wilderness, in which livestock grazing totally goes against the Wilderness Act mandate that Wilderness remain "untrammelled."

Livestock grazing on National Forests, including Wilderness, degrades our public lands. Impacts from grazing needs a through, transparent, public process that complies with federal laws. This includes the National Environmental Policy Act.

Revisions to Forest Service grazing policies should encourage and prioritize voluntary grazing permit retirement. This will reduce permitted livestock grazing in National Forests, including within Wilderness. We must protect Wilderness, other public lands, and wildlife.

The FS can not have the excessive grazing levels of the 1960s. ITt is clear conditions often can't support increased, or even current, grazing levels.
