Comments: I am writing to voice my objection to the expansion of grazing land given the very high amount already available in the United States. This proposed National Forest land should be left wild and intact, especially critical given the decline of forests and ecosystems worldwide. I just can't understand with what we've seen this past year with the Covid-19 pandemic stemming from destruction of forest land and mixing of human and animal species that this issue is still on the table here in the US. Please keep this land as untouched National Forest.
