Title:

Comments: Greetings.

Livestock grazing on PUBLIC LANDS, owned by citizens, tax payers, and concerned naturalist like myself, needs to be discontinued in its entirety as quickly as possible. Private landowners making a profit using tax-payer owned land, is not only inequitable and unfair to their fellow citizens, but is destroying natural ecosystems and environments that must be allowed to evolve in their own way and at their own pace.

Please also note that the USDA Forest Service, like my local police force, exists TO SERVE AND PROTECT; in this case, to serve and protect the land and wildness and ecosystems and living creatures of these places...NOT ranchers, domestic cattle, or private land/animal owners.

Thank you for taking the right, just, and environmentally sustainable action, and returning all PUBLIC LAND back to its natural state, with no grazing whatsoever.

Thank you for addressing the following concerns:

The Rangeland Management Directives have the potential to significantly affect millions of acres of public land, including Wilderness, where livestock grazing is fundamentally at odds with the mandate of the Wilderness Act that Wilderness remain "untrammeled."

Livestock grazing on National Forests, including millions of acres of Wilderness, significantly degrades our public lands. Impacts from grazing must be fully examined and addressed through a transparent, public process that complies with federal laws, including the National Environmental Policy Act.

Any revisions to Forest Service grazing policies should encourage and prioritize voluntary grazing permit retirement to reduce permitted livestock grazing across the National Forest system, including within Wilderness, so as to protect Wilderness, other public lands, and wildlife.

The FS should not return grazing to the excessive levels permitted in the 1960s when it is clear conditions oftentimes cannot support increased, or even current, grazing levels.

The Forest Service must develop policies that ensure the agency will maintain authority for grazing management decisions and hold grazing permittees accountable for the impacts their livestock has on public lands.

The recovery of imperiled or threatened species needs to be prioritized on National Forests and livestock grazing managed so as not to jeopardize species' recovery.

This leftover Trump administration proposal to increase grazing would not only fuel livestock grazing's contribution to the climate and biodiversity crises, but runs directly counter to the Biden Administration's 30x30 land conservation agenda by sacrificing what could be protected lands to the commercial livestock industry.

The Forest Service must do the right thing for Wilderness, other public lands, and wildlife by dropping its proposed Rangeland Management Directives.

If the Forest Service wishes to amend its directives, the Forest Service must undertake a more comprehensive rulemaking process that complies with the National Environmental Policy Act.

Thank you.  
Peter
