Comments: Save public lands, wildness & all wildlife by dropping the proposed Rangeland Management Directives.

The FS should not return grazing to the excessive levels permitted in the 1960s when it is clear conditions oftentimes cannot support increased, or even current, grazing levels.

The Forest Service must develop policies that ensure the agency will maintain authority for grazing management decisions and hold grazing permittees accountable for the impacts their livestock has on public lands & waters.

The recovery of imperiled or threatened species needs to be prioritized on National Forests and livestock grazing managed so as not to jeopardize species' recovery by dropping the proposed Rangeland Management Directives.

Ranchers have been allowed to destroy so much land for their cattle grazing thereby also killing off thousands of animals.

It is time for the land & all wildlife to be saved.

It is time for plant based foods to help save the environment & reverse climate change.
