Comments: RE: The rangeland management directives are comprised of Forest Service Manual (FSM) 2200, Forest Service Handbook (FSH) 2209.13 and FSH 2209.16.

The only thing that should run in perpetuity should be that the land not be continually used by one industrial or agriculture. It should have complete non-use for 25 years to restore itself before any discussion about use. No more land should be kept by individuals that is passed down to family. This should end.

This land is not made to be used by the few. Our earth needs time to recover and to be available for the public under strict guidelines.
