Comments: I do not support the use of wilderness for grazing. By Allowing individuals the use of these lands for their personal monetary benefit will also mean that these individuals will expect the Federal government to protect their animals from being hunted by bears, cougars, wolves, coyotes, eagles, and any other predators. So not only will the land be impacted but also the wildlife. So protecting wilderness will not be the primary concern. Instead the primary concern will be protecting someone's livelihood. I strongly disagree with allowing a business to take precedence over the health of wilderness.
