Comments: A mix of animals and forest is a good thing. That mix needs to be wildlife. Not domestic cattle. Grazing cattle in grassland type areas keeps these types of land from becoming arid/desert. This is basic land management and should be abided by and considered when permits are requested.

Please reverse the Trump Administration Era's Forest Service grazing plan. This leftover Trump administration proposal poses other problems as well. It fails to hold livestock grazers accountable by not setting proper standards to adequately monitor conditions on the ground, and it excludes the public from some grazing decision processes. If all this weren't bad enough, increased grazing would not only fuel livestock grazing's contribution to the climate and biodiversity crises, but runs directly counter to the Biden Administration's 30x30 land conservation agenda by sacrificing what could be protected lands to the commercial livestock industry. Thank you for reading my comments and I hope we take these actions immediately.

Kind regards,
