Comments: This leftover Trump administration proposal to increase grazing would not only fuel livestock grazing's contribution to the climate and biodiversity crises, but runs directly counter to the Biden Administration's 30x30 land conservation agenda by sacrificing what could be protected lands to the commercial livestock industry

This is the opposite direction the FS should be moving. Instead of increasing livestock grazing on public lands, the agency should allow vacant allotments to be returned to wilderness, wildlife, and/or even other public lands by limiting, rather than increasing, inappropriate livestock grazing in National Forest lands.
