Comments: Grazing IS ULTIMATELY At ODDS With OUR Wilderness.

By Allowing grazing to over take a Large acreage of the Wilderness in the National Parks will be a HUGH Disaster for OUR Wildlife, OUR Trees, And Vegetative Growth which various Fauna RELY on During different SEASONS for Shelter and food sources.

Also I read that grazing is being considered to go into areas of the National Park Wilderness where there are large areas of WETLANDS, which will TURN into A QUAGMIRE! Causing HUGH Land Erosion and LEACHING of VALUABLE Soils into OUR STREAMS And RIVERS, which will CHOKE Fish and Plant Life in OUR Waterways.

This is HEART BREAKING To LOOK AT and REALISE the DEVASTATION This WILL CAUSE A HORRIFIC RIPPLE AFFECT on The Micro-Ecosystem and the Macrosystem of OUR WILDERNESS National PARK and Surrounding PUBLIC LANDS And Waterways. (THIS RIPPLE SHALL ONLY GET BIGGER). Out of Hand Like A WILDFIRE!!!
