Title:
Comments: Disallow foreign entities to have grazing permits on public lands.

Incorporate Climate change into all discussions of grazing management.

Expand and provide clear and finite reasons for a permittee to lose a permit and strictly adhere to the criteria. There is too little being done about those permittees having continuing infractions.

Begin a rapid phase out of Grazing Permits on Federal Lands. Grazing impacts the land so much that all other valid uses are secondary and are not given equal value/use. The costs to taxpayers are not justified and those with permits feel they are entitled to do whatever they want with our land. The "custom and Culture" of public lands ranching is a culture of killing all wildlife that competes with the livestock, graft and corruption to bypass good management, a feeling of entitlement, a reduction in habitat for all other species, reduction in forage for all other species, opportunities forgone for hunting, fishing, Backpacking, and birdwatching.

Permittees should be able to take a permanent reduction or total rest of the land forever without threat of revoking permit and given to another.
