Comments: Public land grazing fails to hold livestock grazers accountable by not setting proper standards to adequately monitor conditions on the ground, and it excludes the public from some grazing decision processes. If all this weren't bad enough, increased grazing would not only fuel livestock grazing's contribution to the climate and biodiversity crises, but runs directly counter to the Biden Administration's 30x30 land conservation agenda by sacrificing what could be protected lands to the commercial livestock industry.

I am a vegetarian, we are a growing demographis in the USA. There will be less need for cattle ranching and grazing because the populace is not demanding more beef and milk products. Please use common sense when changing use of land in all protected areas.

Thank you,

Janet Swierkosz
