Comments: As a user of our wonderful national forest lands I strongly object to the strong move to favor and require grazing in wilderness areas and other forest service areas. NO wilderness grazing should be allowed and land should be protected from overgrazing and destruction in other areas. Vacant leases should remain vacant and other allotments should be added to vacant status as they become available. No restocking of allotments or allowing stocking to maximum unsustainable levels should occur under any circumstances! The Forest Service should play a major role in filling the 30X30 conservation agenda by protecting lands and reducing the climate change effects that are an international crisis.
