Comments: Living against a national forest and spending much time within its boundaries, we see the annual devastation of the soil & fauna. The water coming out of the canyon above us is diverted into an irrigation canal which is polluted with giardiasis from cattle feces. I could go on and on. We would love to see the practice end entirely as it would not present any real hardship to the ranchers around here. Short of that, PLEASE do not expand the areas that are subject to this practice! Public land belongs to all of us and should be protected, not exploited as a shortcut for one segment of the population. Thank you.
