Comments: This plan sets the AML extremely low at just 50-104 wild horses on 19,700 acres. Even at high AML, that's one horse for every 394 acres! This range is far too low to maintain a self-sustaining, genetically viable population of wild horses in the Territory. The American people want wild horses protected as part of a living legacy in this area; it is just and ethical to preserve them in this ecosystem in which they have evolved.
