Title:

Comments: The plan provides for fertility control to be used to control the population growth rate of the horses in the Territory. The Forest Service must consider how:

(1) the use of these options will impact the health of the herd when the population is maintained at such a small population.

(2) PZP has over 30 years of proven efficacy and should be the preferred tool for use in the Territory.

(3) IUDs have not been proven humane or effective in wild, free-roaming herds and should be eliminated from further analysis.

Please protect our wild horses

I don't understand why you would kill our horses which our taxes pay for National Parks they roam in

I don't want them killed. My taxes also subsidize ranchers and farmers so I believe you should listen to the people paying for the upkeep of the land. We don't want our wild horses rounded up and sent to barbaric slaughter houses. Why is cattle allowed to graze on National Land?
