Title:

Comments: Dear USDA Forest Service,

Thank you for your service and support of our forests.

The Rangeland Management Directives have the potential to significantly affect millions of acres of public land, including Wilderness, where livestock grazing is fundamentally at odds with the mandate of the Wilderness Act that Wilderness remain "untrammeled."

Livestock grazing on National Forests, including millions of acres of Wilderness, significantly degrades our public lands. Impacts from grazing must be fully examined and addressed through a transparent, public process that complies with federal laws, including the National Environmental Policy Act.

Any revisions to Forest Service grazing policies should encourage and prioritize voluntary grazing permit retirement to reduce permitted livestock grazing across the National Forest system, including within Wilderness, so as to protect Wilderness, other public lands, and wildlife.

Please do not return grazing to the excessive levels permitted in the 1960s when it is clear conditions oftentimes cannot support increased, or even current, grazing levels.

It is my hope that the Forest Service develops policies that ensure the agency maintains authority for grazing management decisions and holds grazing permittees accountable for the impacts their livestock has on public lands.

The recovery of imperiled or threatened species needs to be prioritized on National Forests and livestock grazing managed so as not to jeopardize species' recovery.

This leftover Trump administration proposal to increase grazing would not only fuel livestock grazing's contribution to the climate and biodiversity crises, but runs directly counter to the Biden Administration's 30x30 land conservation agenda by sacrificing what could be protected lands to the commercial livestock industry. Please do the right thing for Wilderness, other public lands, and wildlife by dropping its proposed Rangeland Management Directives.

When the Forest Service amends its directives, a more comprehensive rulemaking process that complies with the National Environmental Policy Act is needed.

Thank you for the opportunity to write.

Take care, God bless you all,

Nicole Sanfilippo
