Comments: Heber wild horses have been around, since at least 1907 and ofcourse likely centuries before. The Heber wild horses are a historic population that merits real protection and sincere humane management by the Forest Service. There is a better, more sustainable, cheaper, and more humane way to manage wild horse population numbers. It is a proven safe and efficient method called PZP that can be darted in the field without capture. This is what the forest service must try first, before any extreme removals to unsustainable numbers.
