Comments: Please reconsider reducing the historic herd of Heber Horses and our public land they use. Tourists love seeing the horses in their natural habitat. They are good for the local community as the tourist industry brings revenue to the area. Use PZP to control herd size not permanent sterilization of the stallions. PZP works! Reducing the herd from approximately 420 to 100+ is not viable. They will not survive. The horses are also helpful in keeping the underbrush low to prevent forest fires.
