Title:
Comments: Please consider the following points related to Mud Creek Vegetation Management Project #55744:
-- A new comment period should begin no earlier than June 1st when the public can access the project area and the locations of proposed road construction. Roads to the area will be impassible till June.
-- The project should protect Old Growth Standards as specified in the Forest Plan.
-- The project should not build new roads, reconstruct naturally decommissioned roads or build temporary roads in the already heavily roaded project area.
-- For such a large project that affects bull trout, the forest service should prepare an EIS that includes on the ground, site specific analysis.

Thank you for your consideration
