Title:

Comments: kindly refrain from implementing this plan as written.

1. it is too long term in scope. a lot can happen in the interim.
2. there appear to be no guiding principles for this project. how will what is learned be able to influence future decisions with this timeline?
3. what relevance will today's parameters have as time goes on?
4. what baseline is currently established in order to measure success/failure of the project through time?
5. what is your logic for cutting roads in order to do this work? how does road building improve our national forest?
6. how does the plan change when fire eliminates the areas in the forest?
7. what happens to downed wood?
8. what are your expectations for forest recovery post-project? how will treated areas be managed in the future?
9. this region is experiencing pressure due to development. how is this reflected in your plans?
10. how is this plan influenced by water or the lack thereof?
11. how is plan influenced by fire and erosion?

tighten this up. this is not a valid proposal as written.

thank you.
