Comments: I do not understand why you have to remove 300 horses from their natural habitat, they are part of that ecosystem. Geld the stallions (without killing) them and leave one to lead the herd and protect it. Otherwise- stop this crappy we need the land for cattle. Government has no right to take anything out of the ecosystem. It is just 300 wild horses and donkeys. The management of the land has been horrible- you have killed or penned so many wild horses and burros/donkies its not even conscionable, all to let cattle owners have more land to let their cattle roam on. Find a balance. Let the wild horses live on their native habitat.
