Comments: As a tax payer, voter and lover of nature and mustangs, i implore you to rethink your approach to downsizing the herd in the Apache Sitgreaves National Forest to 50 horses and then let them grow back to 104 horses. This is not scientifically healthy for the horses or the environment. it will force the bands to inbreed which will in turn cause health and stability issues among other things. Please use science and reasonableness to protect nature and what it affords us.
