Comments: American wild horses are part of our history. I do not want to see their eradication. You can manage them humanely by using PZP fertility control. It is done with the Salt River herd, as you know, and works well. There are thousands of acres of forage for both horses and cattle...I live half of the year in AZ and know that to be true. Please consider all manners of humane control and allow the American wild horses to live freely on our land. Thank you.
