Title: CEO

Comments: Hello,

Asa Forest Service partner for 10 years now, I ask you to consider a few points which I take issue with.

1. 50 AML is too low to be a viable program. Even 100 hurts my heart but would be an improvement to what is proper which is 150 per many experts in the field.
2. The FS has no time or manpower or the desire to be in the fertility control business. You must contract out or develop a voluntary agreement. PZP used correctly is proven safe and is inexpensive. Anything else is still under review and needs more testing, but not on our wild horses. Sterilization is just wrong when other options can work.
- 3.the whole fencing issues needs a complete review by a group of partners for viable solutions not demonstrated in this EA.
