Comments: Please do not consider for implementation this or any mining operations in the Mammoth Area. It is an active Volcanic, thermal, and seismic area unique to the Eastern Sierra that is more valuable than anything that would be mined from there.

This misguided endeavor can only harm the businesses and residents as well as the Millions of tourists who bring millions of dollars to this area every year, even during 2020.

And we know that historically, mining corporations are rarely held accountable for the environmental destruction that such a mine would produce.

Just say "NO!"
