Comments: The plan for fertility control for the Heber herd must think of these things:

the overall health of the herd when the population of the herd is really low

PZP should be the tool used since it has been proven efficient

IUDs are not humane or effective in wild roaming herds--eliminate them please!

These horses have been the target of illegal hunting since 2018. We must protect these federally protected wild horses from harm and find those responsible for harming them.

Thank you
