Comments: Attention, I care deeply about the Herber Wild Horses and believe they must be preserved and managed with the utmost care. I believe the information used in the E.A. is prejudicial and in the best interests of livestock grazing. This plan would result in inbreeding and subsequently the end of the Herber Wild Horses. These are OUR public lands and the majority of Americans want the wild horses on OUR public lands. The Herber Wild Horses should be managed with PZP fertility control measures and then left to live their natural lives.
