First name: Elizabeth

Last name: King

Organization:

Title:

Comments: Wild horses do not overpopulate. This herd has been studied and there is proof that they self-regulate their own fertility and the increase in population has been proven to be 3%, not the 20% reported by the BLM (Bureau of Land Management)

Please protect this herd from being removed from its current range of habitat. They have lived there for 150 years. Protect our wild horses!
