Comments: The Heber Wild Horses are a natural and valuable part of our ecosystem. Instead of removing large numbers of horses from the wild and injuring or killing them in the process, please begin a darting program to disable the mares from bearing foals every season. That way the herd will be more naturally reduced over time and inbreeding won't occur as it would if only a small number of horses were left in the wild. This program has been very successful with the Salt River Wild Horses and they could mentor those watching over the Heber horses. Thank you.
