Comments: To whom it may concern: I wish to voice my strong concern regarding the proposed EA/plan for the future of the Heber Wild Horses! I care deeply for these horses as well as for their continued existence in the forest area! These horses are the sole reason that I have visited the area in the past or will in the future. It is my belief that the proposed plan is not genetically viable for the herd and I am in support of option 1- no action! These horses should remain on these public lands where a great majority of the public want them to continue to roam wild and free co-existing with all other wildlife. They can and should be humanely managed while remaining on the PUBLIC lands where they have been for so very long! Please consider what the public desires as it pertains to this herd and it's future! Thank you for your time and attention!
