Comments: I happen to agree with the points made below.

Points Herd Under Wild and Free-Roaming Horse and Burro Act of 1971

Given THEIR OWN TERRITORY in 1974

HAVE PREDATORS AND INCLEMENT weather to control numbers

2005 comment being used for LIVESTOCK on Chedeski fire area was 16 years ago and no other livestock mentioned.

taking away 300 horses and leaving barely 100 will NOT provide enough population or genetic diversity to keep a healthy viable herd.

The remaining horses being castrated and females given a poisonous pesticide for birth control is

UNACCEPTABLE.

the failure of the USDA and U.S. Forest Service to find the murderers of entire families is inexcusable.

The allowance of euthanasia during the "TREATMENT PLAN" has no impartial witnesses, so which horses being shot and really why is questionable at best.

When horses are captured in this plan, how do we know all is being done so they are not hurt. Also this argument ties to the "euthanasia option."
