Comments: I support NO ACTION.

I am requiring for a full scientific study (2nd and 3rd party) which would include the impacts of all use in the forest including cattle grazing and the impact of the human element on the Sitgreaves National Forest.

I also require an Environmental Impact Statement (EIS). Due to the magnitude of the management plan and significant impact on the environment an EIS is required, pursuant to NEPA (National Environmental Policy Act).

There is no scientific indication of overpopulation. And I require the proof of this or The Forest Service will be breaking the law.

I ask why state the horses are over populated with no proof and then plan to add more cattle for your own agenda. Different animal but increased quantity on this land of them? If there is over population you wouldn't be getting rid of animals to just add more.

I hope you consider my and many others statements for NO ACTION. We are in support of preserving a species that has been subjected to thousands of death by slaughter because of these mismanaged roundups. I require all above to be done and given to the public.

Thank you,

Julie Kline
