Comments: Please Keep the Heber horse in place. You need to institute a PZP program to control the population. It appears you find removal is the easiest solution. oh and then in 5 more years you will be doing the same thing because you are reactive instead of proactive. you are wasting tax payer money with roundup/removals. The Heber horses are still at a manageable level for their rightful land allotment. Please keep the Heber wild horses on their land and start using PZP to manage the herd.
Thank you!
