First name: Scott

Last name: Flint

Organization:

Title:

Comments: It is unfortunate that this unique fragile creek is being endangered even more let alone again. The construction above it through the years has stressed this fishery to its limits. More silt and less flow is more evident each year. I've watched it since 1980. Everything must be done to protect this unique fishery for others to enjoy. Not just fishing. There should be no mining anywhere near that general vicinity to protect the unique pristine beauty that those resources provide.

Please help voice your concerns for the future of Hot Creek
