Comments: Due to this unique and special irreplaceable treasured environment I respectfully object to this project going forward. I am a 80 year resident of Cal and have camped, fished, hiked, explored and photographed this part of the Eastern Sierras since age 10 almost yearly. Hot creek is an irreplaceable treasure with unlimited value. This area is a fragile eco system which could easily be damaged FOREVER. Drilling and mining and all the required other activities including clearing grading and digging the land poses a real undeterminable threat to Hot creek its animals, plants and surrounding unique topography. This area should remain undeveloped and unmined and reserved for future generations including my grand children. Thank you for your consideration
