Title:

Comments: This proposal must be required to submit an Environmental Impact Statement, scientific based support for why gold and other commercially valuable minerals are likely to be found in the area of Hot Creek, headwaters and tributaries, a plan for impact and recovery from areas affected by the exploratory operations of this proposed project. The world and California does not need more gold, instead we need to preserve our precious water and environment which benefits so many people. I call upon the California and federal governments to act to end this proposal of KORE USA Ltd.
