Comments: We need way more information on the details of the project. I agree with Sierra Waves questions on details: where Kore Mining will get the water needed for drilling and how much water do they need, where the waste water/cuttings will be hauled off to, how deep they plan to drill and in what direction, how many truck trips/day, what route they will take, etc. There is no mention in the scoping document about the impacts of this project to wildlife, recreation, and the tourist economy (from Sierra Wave). I grew up in Mammoth Lakes and am very distraught to hear exploratory drilling is even being considered in the beautiful area. We should be preserving the land and water, not damaging and draining it.
