Comments: I am vehemently opposed to this project as it is wrong on so many levels. The forestry is the caretaker of these lands for the American public, water is a primary concern as there simply is not enough as a Harvard study indicates the earth will be out of water in 300 years...mammoth is already suffering from lack of rain fall and snow load for its water supply and the amount of water this project will use is egregious . Not to mention the impact on wild life is enormous . The impact on the land is enormous, the impact on the community is enormous ...and you as the caretaker of these lands for now and future generations must decline this project....

Thank you for your consideration in this matter and for being the spokesman for tthe people of mono county and the environment of mono county.
