no mining ion this national site owned by 330,000,000 americans. no attacks on l.4 million acres. there should be no grazing in this area by roberbaron cattle. if there are any wild horses, their herds should be protected to continue living there. i am against hunting, trapping and new roads. the watershed waters belong to the national site, not to neghbors on private land. keep it in the national site. the first duty of this fores service should be to the entire american population oif 330 million not to local profiteers who want to ruin the forest for their own enrichment. i find this agency fails in that regard l00% of the time. they fail to represent that this is a national site and its resources are for the nation, not the local profiteers who want to come in to raid it for their own enrichment. i am against any logging or thinning in this forest. i find the first priority is to protecyt th wildlife and birds that live in this forest. the native plants are part of that protective effort. i find that protecgtion of both is missing by forest service employeses. they get an f minus for that effort.all snags should be left intact in the forest. down logs are needed by wildlife. i am against prescribed burning in this area - it kills wildlife. respect trees - they shojuld be able tio pick out their neighbors which they can do through their rooots. you should not be cutting down and planting plants they dont want around them. this commetn is for the publci record. please receipt. jean publiee jean public1@gmail. i ask that this agency become familiar with the book by wohlgemuth a german ranger and others who have done much research on how trees grow - through electricity through roots, etc.
