Title:
Comments: I object to all prescribed burning and the pollution it will cause in the bitterroot valley. You are exposing more than 40,000 people to continual air pollution by this project. Burning in the forest causes air pollution in the valley. People with asthma, respiratory problems, the young and elderly will be harmed by this project. I object to an exclusion from doing an EIS. The size and scope of this project, just from the air pollution caused by burning, should require an EIS. Also, burning affects wildlife, driving bear, elk, birds, bobcat, wolverine, and other species into the valley to escape the prescribed burning and disturbances proposed in the forest. You need to do an EIS to address the disturbance of endangered wildlife species during this project.
