Comments: Hot Creek is one of the region's iconic fisheries. Though this project is only exploratory for now, as a CalTrout supporter, I am all too aware of the grave impacts mining can have on fish and freshwater ecosystems. Mining operations can lead to sulfuric acid and heavy metal contamination when rainwater or surface drainage carries contaminants to nearby streams, rivers, lakes, and groundwater harming species who rely on these water sources. Not only is this proposed project just above Hot Creek, but the water from Hot Creek eventually flows into Owens River and Crowley Lake, putting this entire ecosystem at risk.
