Title:

Comments: To whom it May Concern:

There are so many reasons this operation should not be allowed to proceed, Environmental, Recreational, Economic - but I wish to focus on what I see to be the biggest threat to our home. WATER! They intend to pump water from our precious and water table that is already depleted by LADWP. And to make this worse, they want to use our water in their leaching process which will then leave our water poisoned! They assure us they can transport the contaminated water out of our area (to where?), but leaks and spills are certain to happen thereby poisoning the areas surface water. Please do not allow this to happen!
