Comments: 62" wide on the trail would mean nothing. The next size up in the SXS line goes from 50" to 64" apparently this was not researched at all. Most parks are going to 70" and under. Please allow at least 64" I had to switch from atvs to a sxs due to my wife and we love Wayne National Forest. The only reason for a wider SXS is due to a smoother and safer ride. The SXS are slower moving and due nothing more than an ATV does and it's foolish to believe otherwise. I hear dirt bike riders which I also have talk about SXS running my kid over moving fast. The dirt bike is the fastest moving vehicle on the trail. Thank you I have been riding for 48 years and k ow a lot about riding
