Comments: This issue spans ALL of CA forestland.

The timber industry JUMPED when Newsom removed CEQA protections for "fire mitigation" in 2019. This is just BAD POLITICS in a dire time when HUMAN CAUSED CLIMATE DISRUPTION is revealing that we need as many BIG TREES-30" diameter and bigger-standing!

Shasta Trinity National Forest is proposing to log over 4,000 acres in Forest Glen and the Wild and Scenic South Fork Trinity River in the Smoky, Red Mountain, and Prospect Creek tributaries. Public safety and community protection should be a priority. However, these priorities can and should ONLY be managed by focusing on home hardening, defensible space, creating strategic SHADED fuel breaks and removing legitimate hazard trees along major roads and ladder fuels. NO BIG TREES FOR PROFIT!!!
