Comments: U.S. Forest Service

Dear Persons:

Every river within the Six Rivers designation is impaired.

Please protect and work towards the recovery of struggling salmon and wildlife populations, water quality, habitat connectivity and visual quality in the already impaired South Fork Trinity River. Please forgo this massive logging project. Focusing solely on imminent hazard trees (that are completely dead), and only around recreation sites and on major roads, not the entire 922 acres of roadside logging, as proposed in Alternative 2, is our best option for a healthy and safe watershed.

Please rely on science in your decision-making!

Sincerely,

George Clark
