Comments: Dear Supervisor Birkey and August Phase 1 Planning Team,

I just returned from a week of volunteer work repairing some the trails in the Shasta-Trinity National Forest that makeup the Bigfoot Trail. The Bigfoot Trail passes along the Wild and Scenic South Fork Trinity River, and I am dismayed that the USFS still persists in wanting to log the area. Natural regeneration is happening throughout the mosaic burn of the August Complex, and it should be allowed to continue.

The thousands of acres of ground based post-fire logging, hundreds of acres of logging in Riparian Reserves, eight miles of "temporary" roads and opening two miles of decommissioned roads would harm water quality, soil, regeneration, wildlife, salmon, and other aquatic life. Additionally the visual quality in these watersheds would be greatly impaired by these invasive projects. The environmental assessment offers little to no real data to support the claims that this project would be insignificant. For decades scientific research explicitly shows that logging in fire-affected forests is ecologically the worst thing you can do for every aspect of the environment, and would likely increase future risk of fire in these watersheds. Furthermore, and contrary to false claims made in the report, post-fire logging will actually release large amounts of carbon to the atmosphere, violating President Biden's executive order on climate change.

Please protect and work towards the recovery of struggling salmon and wildlife populations, water quality, habitat connectivity and visual quality in the already impaired South Fork Trinity River. I urge you to forgo this massive logging project and focus on public safety. Focusing solely on imminent hazard trees (that are completely dead), and only around recreation sites and on major roads, not the entire 922 acres of roadside logging, as proposed in Alternative 2, is our best option for a healthy and safe watershed.

Sincerely,
