Comments: To Whom it May Concern,

The Gold Butterfly project will greatly impact traffic on Willow Creek Rd and will have major impacts on the wildlife, environment and community for an extended period of time. This area has been a quiet and serene place where the wildlife find sanctuary and the environment has been consciently preserved. consistent heavy machinery traffic will disrupt all aspects of this area and have long term impacts on a greater area than just the land directly around the road. The wildlife that is enjoyed and recreated around will be disrupted and the environment will have long terms effects from the pollution and disruption.

Beyond the obvious environmental impact that should be reconsidered, there is the impact it will have on the community that calls this are home. The sound and traffic impact will be very disruptive and be a stark contrast to the areas current state which is why all of the landowners choose to make this their homes.

The road itself will succumb to extensive wear and tear due to the machinery. The road itself is already very rough and worn and the road should be improved and maintenance throughout the process as well a full road improvement at the end to allow the inhabitants of this are to safely access their homes.

Thank you
