Dear Frank Aebly,

Dear Supervisor Carlson and Ranger Aebly,

No herbicides on Mendocino National Forest and the North Shore project. I spent many years in the USFS and witnessed unnecessary long-term damage.

Herbicides are not necessary for sapling tree survival. The goal of controlling invasive species can be accomplished through a multitude of non-toxic alternatives that must be considered. Further, reducing the amount of ground disturbance, as proposed through Alternative 5, would reduce the need for invasive species management in the first place. The Forest Service shouldn't create new problems and further exacerbate one of the most significant threats facing our forest ecosystems.

Please do not endanger human health and the environment, choose Alternative 4 and the reduced logging footprint of Alternative 5.

Sincerely,

Sincerely,

J.A. Savage
